Full stack junior exam

To complete this exam you need to complete the following questions.
Make sure the final code doesn't break; it's better to have a running app with less features.
Use Git and commit often with meaningful messages.

Tests are welcome as a bonus.
Please use the latest Node version and supply a short README file.

1. Please write a function (fn) that aggregate inputs (strings) and return it if there is no input
   for examples:

   ```
   console.log(
         fn("hello").fn("world").fn("!!!").fn()
   )
   //Will print: hello world !!!
   console.log(
         fn("This").fn("is").fn("just").fn("a").fn("test").fn()
   )
   //Will print: This is just a test
   function fn (str) {
         /** YOUR CODE GOES HERE /**/
   }
   ```

2. Please implement a small cart system, the cart will present 1 product to porsche with 2
   plans type: monthly subscription base and yearly subscription.
   Please create a UI that allows the user to add and remove from the cart.
   Once the user choose the product and the plan the cart should redirect to a purchase
   form when the user will insert his credit card information.
